

Portable Dispensing Unit with Air Gap

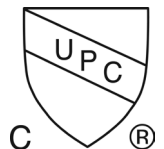

RD's new Saftflo® Portable Dispensing Unit (PDU) with a built-in Air Gap is ASSE certified and provides added back flow protection. The air gap is open to atmosphere while at rest and closes during dispensing. When dispensing stops, or if vacuum or pressure is applied, the gap opens to prevent chemical from getting back into potable water.

As with our traditional PDU, the PDU with Air Gap technology turns any bottle into a portable dispenser with closed loop performance. The versatile, convenient PDU is small and lightweight for easy cleaning anywhere water is available.

- Available in multiple flow rates: 1, 2, and 3.5 GPM
- 32 color options - trigger, collar, hose nut, and bucket clip
- Certified in compliance in both the United States and Canada:
 - Uniform Plumbing Code (UPC®) - ASSE 1055-2009
 - National Plumbing Code of Canada - TIL-MSE 57-2009

For superior performance results, use in conjunction with RD's Bottle Insert.
