

SaFTFlo® Dual Flow Portable Dispensing Unit

The SaFTFlo® Portable Dispensing Unit is a versatile and convenient dispensing system, offering an economical addition to your chemical dilution system anywhere water is available.

Offering dual flow channel and dual dilution, the SaFTFlo® PDU - Dual Flow will offer the most accurate dilution in the PDU market, 40% more accurate than the current competition.

The metering tip is placed in the insert as opposed to the head of the unit. A concentric head attachment makes it easy to transfer between multiple chemical bottles.

A single lever activates the change between the flow channels, enabling the consumer to be able to pull different dilutions from the same chemical to accommodate different uses.

Key Features

- Accurate dilutions - the dual-port cap adapter offers a dual flow channel
- Dual dilution is established with a dual straw insert
- The dilution is carried out in the insert as opposed to in the PDU head so it can be easily interchanged with different chemicals
- A single lever changes between single and dual flow and dilution
- Built in back preventer ASSE 1055-2009
- Air Gap
- Shroud cover
- Built in bucket clip

Materials / Options

- Standard and medium flow rates
- Dual flow rate system including 1 gpm and 3.5 gpm
- Materials: Polypropylene, Kynar, Stainless Steel, Hastelloy
- Water Hose- Available in NPT only
- Additions: Quick connects, available in NPT and BSPP thread

For superior performance results, use the SaFTFlo® PDU Dual Flow in conjunction with our full line of liquid containment and dispensing products from the SaFTFlo® Fluid Management Systems.
