

Fixed 90° Barb

Swivel 90° Barb

Benefits

- An angled barb allows installation into tight spaces especially if there are height restrictions
- A rotating barb keeps chemical lines from kinking or tangling, preventing chemicals from not being drawn up
- Accurate dilutions giving maximum product performance and cost savings
- Dry break valve prevents waste and offers increased safety during change out
- Offers a fully closed-loop system

Key Features

- Flow rates: standard and medium
- 1/8, 1/4, 3/8 hose barb diameter
- Proprietary key lock options available
- Sizes: 38mm, 40mm, 44mm, 53mm, 60mm, 63mm, 70mm
- Materials: Wide range of plastic for chemical compatibility
- For color options please contact your sales representative

Compatible Products

- SaFTFlo® Inserts
- SaFTFlo® Wall Mount Dispenser
- SaFTFlo® Docking Station
- SaFTFlo® Fluid Monitor

What is it and how does it work?

The SaFTFlo® 90° barb Cap Adapters come in both fixed and swivel options. Designed as a dispensing solution for tight spaces, they also work to prevent kinks and tangles of the dispensing chemical tubes. They are especially useful when many chemicals are required for use at the same time.

The fixed 90° barb is more suited to those environments where height restrictions are in place.

The Swivel 90° barb is used to prevent kinks and tangles in the chemical lines, which interfere with the chemical draw.
