

## What is it and how does it work?

The SaFTFlo® Wall Mount Dispenser offers a flexible, one or two module unit with a choice of flow rates and dilution options, a fully closed-loop dispensing system.

The one module unit works in line with a single straw insert and will pull only one dilution from the bottle. The two-module unit works in line with the dual straw insert and dual-port cap adapter, allowing two different dilutions pulled from the same chemical bottle.

The wall dispenser is quick and easy to install. It gives accurate dilutions every time, making it very cost effective.

## Benefits

- One-touch operation
- Accurate dilution control
- Air Gap
- Custom configuration and colour coding - design your own system
- Part of our closed-loop system
- Certified in compliance in the United States and Canada:
- Uniform Plumbing Code (UPC), ASSE 1055-2009
- National Plumbing Code of Canada, TIL-MSE 57-2009

## Key Features

- 1GPM, 2 GPM and 3.5GPM flow rates
- 1 or 2 module units for single and dual dilutions
- Quick and easy installation
- Included in kit:
  - Metering Tips / Hose Hanger / Chemical Tube / Discharge Tube / Swivel Connector / End Cap
- Additional Items to add:
  - Single Bottle Holder / Dual Bottle Holder / Brass Quick Connect / Water Hose
- For color options please contact your sales representative
- Instruction sheet available in English, Spanish, Portuguese, French, and German with more to come.
