

Benefits

- Fully closed-loop system
- Reduces mixing mistakes
- Provides a safer working environment
- Protects end-users and the environment from spills
- Limits end-user contact

Key Features

- Works with a 1 gallon beaded bottle - 38mm insert and cap adapter
- Multiple units can be mounted together
- Ergonomic with simple connection feature
- Key locks available - safety feature
- Liquid color matching available
- Company color matching and own branding available

Compatible Products

- 38 mm SaFTFlo Bottle Inserts

What is it and how does it work?

The SaFTFlo® Docking Station provides a wall-mounted bottle holder with a built-in cap adapter. A container of chemical concentrate fitted with a SaFTFlo® bottle insert is put into the docking station where a built-in cap adapter is connected and linked directly to the dispenser. Multiple units can be wall-mounted together, that will work with any wall dispenser.

The system is designed for areas where multiple chemicals are required to keep the workspace organized, preventing costly mixing mistakes. Taking all chemicals off the floor provides a safer working environment that, combined with using a closed-loop system, minimizes leaks, spills, and exposure to chemicals for the end-user.
