

Benefits

- No water supply needed
- Part of a fully closed-loop system
- Fully portable chemical dispenser
- Pre-set dosing
- Precise dispensing
- Durable, ergonomic design
- Color coding available - design your own system

Key Features

- Dose amounts: 1/8, 1/4, 1/2, and 1 ounce
- Fits 38mm and 40mm containers
- Logo printing/branding available

Compatible Products

- 38 mm SaFTFlo Bottle Inserts
- 40 mm SaFTFlo Bottle Inserts

What is it and how does it work?

The SaFTFlo® Hand Pump Dispenser offers easy, portable dispensing and safe chemical containment. The hand pump uses the “lock and key” concept by integrating the closed-loop system into a fully portable dispenser.

Chemical concentrates are “locked” within the container using a SaFTFlo® bottle insert. The hand pump acts as the key with a cap adapter fitment attached to the bottle. When the hand pump is connected to the container, the insert’s safety valve is opened, and the chemical will be released when the hand pump is pushed down.

Once the hand pump is removed from the container, the valve in the bottle insert will close, securing the chemical inside. The system is spill-resistant and holds prime after initial use.

The hand pump is ideal for countertops, mobile carts, and low-chemical use areas since no water supply is needed.
