

## What is it and what does it do?

SaFTFlo® Tamper Evident is a secondary safety check for our closed-loop system. An HDPE collar with lugs snaps to the bottom of the insert substrate to provide a secure connection, preventing unintended removal of the bottle insert.

When an insert with the Tamper Evident collar is inserted into the bottle, the lugs expand open under the bottle neck, making it virtually impossible to remove the insert from the container. It can withstand a pulling force of 70lbs; stronger than any competition in the market.

The end-user replaces the ship cap with a SaFTFlo® Cap Adapter, which opens the insert valve, releasing the chemical. A fully closed-loop system ensures that end-users are never exposed directly to chemical concentrates.

## Benefits

- An extra safety check for closed-loop systems
- Secure connection to lock the chemicals inside the container to minimize chemical waste
- Provides visible evidence if anyone has tampered with the closed-loop connection
- Preventative measure for theft of chemicals

## Key Features

- Compatible with both SaFTFlo® and SaFTGreen™ standard flow bottle inserts
- Compatible with 38mm and 40mm bottle inserts
- Can withstand a pulling pressure of up to 70lbs
- Three length variations of locking lugs to accommodate different container sizes : 0.18", 0.22", 0.25" / 0.457cm, 0.558mm, 0.635mm
- Material: HDPE
- Can be recycled when used in conjunction with the SaFTGreen™ bottle inserts
- Colors: please contact your sales representative

## Compatible Products

- 38mm SaFTFlo® Bottle Inserts - Standard Flow
- 40mm SaFTFlo® Bottle Inserts - Standard Flow
- 38mm SaFTGreen PP Bottle Insert - Standard Flow
- 38mm SaFTGreen TP Bottle Insert - Standard Flow
- 38mm SaFTGreen SV Bottle Insert - Standard Flow
