

## A SECURE SOLUTION

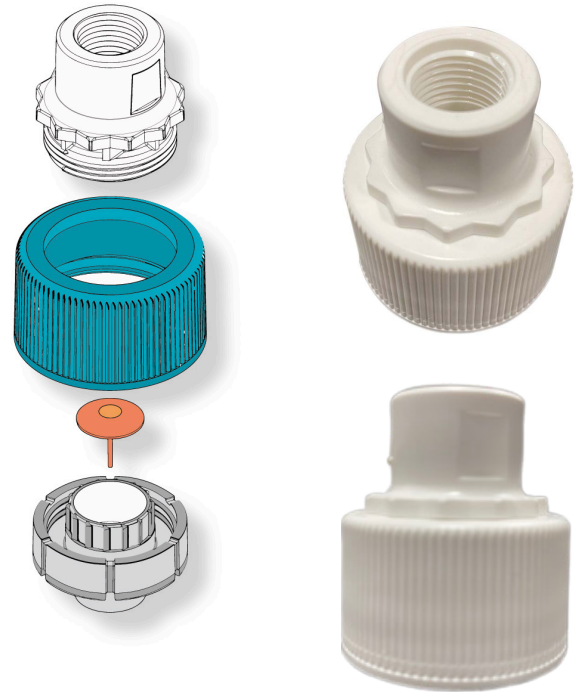

### When Attaching the Chemical Line into the Container

#### What it is How it Works

The National Pipe Thread (NPT) Cap Adapter offers a more secure solution when attaching the chemical line into the container. A hose with a thread is screwed directly into the NPT Cap Adapter, providing a sturdier connection that is suited towards industrial environments, for example H2O treatment.

A larger diameter on the dispensing tube gives higher flow rates. It is also used when larger chemical concentrate doses are required. The threaded attachment also acts as a barrier for dirt and dust from entering the chemical container, common in industrial environments.

NPT is the USA national standard for pipe threads. An adapter can be used to change the thread to British Standard Pipe (BSP), which is used throughout Europe and many parts of the world.

## Benefits

- Compatible with Saftflo Inserts | Saftflo
- Wall Mount Dispenser | Saftflo Docking
- Station | Saftflo Fluid Monitor
- Fits any connection compatible with NPT
- A sturdier connection compared to
- a traditional Cap Adapter
- Recommended for industrial environment
- Compatible with BSP
- Made in Omaha, Nebraska USA

## Key Features

- Standard and medium flow rates
- Proprietary key lock options available
- Sizes: 38mm | 40mm | 44mm | 53mm | 60mm | 63mm
- Materials: Wide range of plastic for chemical compatibility
- Available in natural or 11 colors
