

TURN ANY CONTAINER

Into a Portable Dispensing Unit

RD Industries' Saftflo Portable Dispensing Unit (PDU) with a built-in Air Gap is ASSE certified and provides added back flow protection. The Air Gap is open to atmosphere while at rest and closes during dispensing. When dispensing stops, or if vacuum or pressure is applied, the gap opens to prevent chemical from getting back into potable water. As with our traditional PDU, the PDU with Air Gap technology turns any bottle into a portable dispenser with Closed-Loop performance. The versatile PDU is small and light-weight for easy cleaning anywhere water is available.

What it is How it Works

The Saftflo Portable Dispensing Unit (PDU) with a built-in Air Gap is ASSE certified and provides added back flow protection. The Air Gap is open to atmosphere while at rest and closes during dispensing. When dispensing stops, or if vacuum or pressure is applied, the gap opens to prevent chemical from getting back into potable water. The PDU with Air Gap technology converts any bottle into a portable dispenser with Closed-Loop performance. The versatile, convenient PDU is small and lightweight for easy cleaning anywhere

Benefits

- Compatible with OneFlo™ and Saftflo Bottle Inserts
- When used in conjunction with the OneFlo™ Inserts, it provides the best seal for chemical containment and dispensing on the market
- Chemical line does not empty during chemical change over
- Superior flow rate
- Truly recyclable
- Made in Omaha, Nebraska USA

Key Features

- Turn water on | off at the unit
- NPR and BSPP Thread | Proprietary safety gap atmospheric
- break Back Flow Preventers | Quick Connects
- Uniform Plumbing Code (UPC) | ASSE 1055-2009
- Bucket Clip for bucket | bottle filling
- Water Hose *Available in National Pipe Thread only
- Available in natural or 11 colors
