

THE WORLD'S LEADING BOTTLE INSERTS

For Closed-Loop Chemical Containment and Dispensing

OneFlo™ are the industry's self-venting, true Closed-Loop system for containment and dispensing of concentrated chemicals. They secure the chemical container for safe, easy shipping.

At the heart of the system is the OneFlo™ Bottle Insert (the lock), which features an automatic, self-venting and antireversing valve. The top of the insert is recessed into the container opening and is flush-mounted so it won't interfere with the shipping closure. A dip tube is attached to the insert and reaches to the bottom of the chemical container.

The self-venting insert alleviates positive or negative pressure issues inside the container to prevent spillage during shipment, storage, and handling. The end-user removes the shipping closure to expose the insert and then places the cap adapter onto the container. This opens the spring-loaded valve so that chemical is ready to be drawn.

Benefits

- Compatible with Saftflo Cap Adapters | Saftflo Wall Dispenser | Saftflo Fluid Monitor | Saftflo Docking Station
- A large range of chemicals
- Prevents end-users from chemical burns and inhalation of toxic fumes
- Enables accurate dilution, optimizing performance
- Accurate dilutions = Cost savings
- Increased safety for your team
- Built-in, automatic venting ensures containers do not panel or bloat
- Made in Omaha, Nebraska USA

Key Features

- Sizes: 38mm | 40mm | 53mm | 60mm | 63mm | 70mm | Bungs
- Flow rates: Standard | Medium
- Key locks available for additional seal and security
- Fully customizable: Venting options | Spring options | Tamper evident security options | 32 dilution options
- Available in natural or 11 colors
