

# PATENTED DESIGN CREATES THE FIRST Truly Recyclable Bottle Insert for Chemicals

The OneFlo™ ProValve Insert offers the latest in Closed-Loop technology. This patented design and manufacturing process makes this part of the world's first truly recyclable and sustainably manufactured line of Bottle Inserts for chemical containment and dispensing.

A soft seal is around the plug and over the neck finish to offer a superior seal for both dispensing and transport. It's the only insert with bi-directional valves that allows for better venting and off-gassing, reducing the ability for the container to panel or bloat.

The ProValve Bottle Insert is the most versatile product within the OneFlo™ line. It's compatible with most caps including Saftflo Cap Adapters and OneFlo™ Cap Adapters.

## Benefits

- Compatible with your existing Saftflo Cap Adapters and OneFlo™ Cap Adapters
- No metal parts allow for the widest range of chemical compatibility – one insert for all of your products
- Premium venting allows for ideal off-gassing and prevents container paneling and bloating
- Truly recyclable
- Made in Omaha, Nebraska USA

## Key Features

- Fits most 38mm and 40mm bottles
- Best flow rate in the market
- 32 metering options allow you to choose the dilution you need
- Automatic, bi-directional self-venting
- Sustainably manufactured
- Available in natural or 11 colors
