

PierceValve Insert

Patented Design Creates the First Truly Recyclable Bottle Insert for Chemicals

BENEFITS

- Compatible with OneFlo™ Cap Adapters
- No metal parts allow for the widest range of chemical compatibility - one insert for all of your products
- Premium venting allows for ideal off-gassing and prevents container paneling and bloating
- Truly recyclable

KEY FEATURES

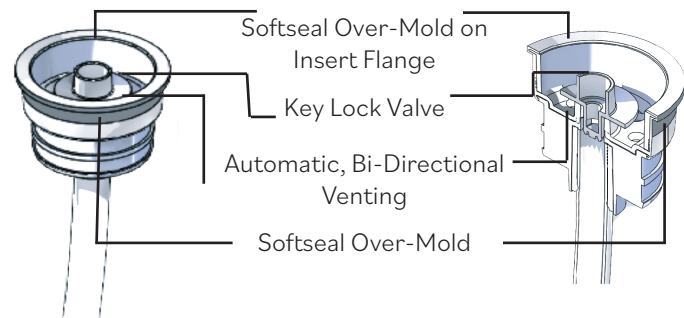

- Fits most 38mm | 40 mm bottles
- Best flow rate in the market
- 32 metering options allow you to choose the dilution you need
- Automatic, bi-directional self-venting
- Sustainable manufactured

PATENT: 10,8550,458 | 10,414,645

The OneFlo™ PierceValve insert offers the latest in Closed-Loop technology. The patented designed and manufacturing process makes this part of the world's first truly recyclable and sustainably manufactured line of Bottle Inserts for chemical containment and dispensing.

A softseal is around the plug and over the neck finish to offer a superior seal for both dispensing and transport. It's the only insert with bi-directional valves that allow for better venting and off-gassing, reducing the ability for the container to panel or bloat.

The PierceValve Bottle Insert is the most secure product within the OneFlo™ line. It's compatible with OneFlo™ Cap Adapters.
