

Tamper Evident

We've Got Your Back When it Comes to Safety

BENEFITS

- Compatible with OneFlo™ PierceValve | ProValve inserts
- An extra safety check for Closed-Loop systems
- Secure connection to lock the chemicals inside the container
- Provides visible evidence if anyone has tampered with the Closed-Loop connection
- Can be recycled when used in conjunction with the OneFlo™ Insert

KEY FEATURES

- No metal parts
- Compatible sizes: 38mm | 40mm bottle inserts
- Can withstand a pulling pressure of up to 70 lbs of retention force
- 3 length variations of locking lugs to accommodate .18" | .22" | .25" - .475cm | .558cm | .635cm
- Material includes HDPE
- Sustainable manufactured

**PATENT: 10,301,088 |
10,336,517 | 10,618,710**

OneFlo™ Tamper Evident is a secondary safety check for our Closed-Loop system. An HDPE collar with lugs snaps to the bottom of the insert substrate to provide a secure connection, preventing unintended removal of the bottle insert.

When an insert with the Tamper Evident collar is inserted into the bottle, the lugs expand open under the bottle neck, making it virtually impossible to remove the insert from the container. It can withstand a pulling force of 70 pounds of retention; stronger than any competition on the market.

The end-user replaces the Ship Cap with a OneFlo™ Cap Adapter, which opens the insert valve, releasing the chemical. A fully Closed-Loop system ensures that end-users are never exposed directly to chemical concentrates.
