

Mechanical Vent

Unique Solution for Specialized Chemicals

PATENT: 8,083,107
MADE IN THE USA

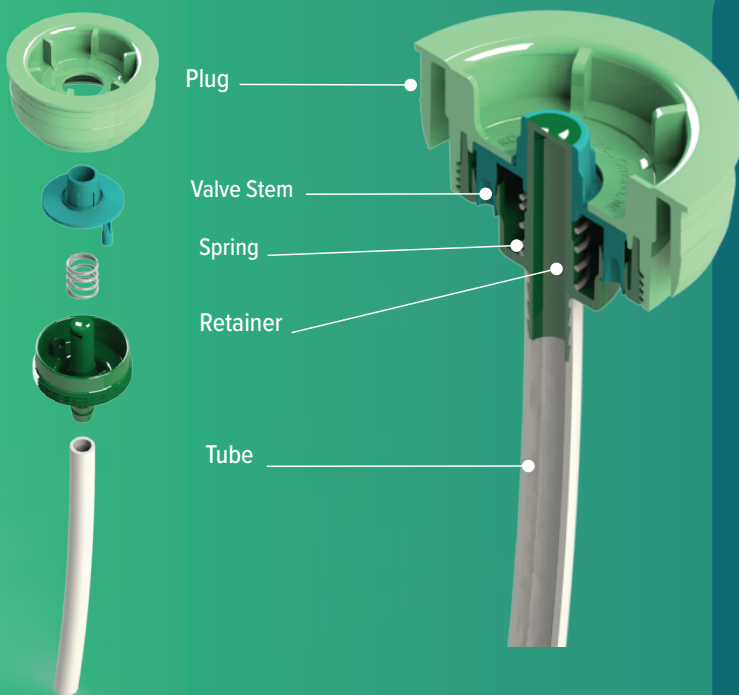

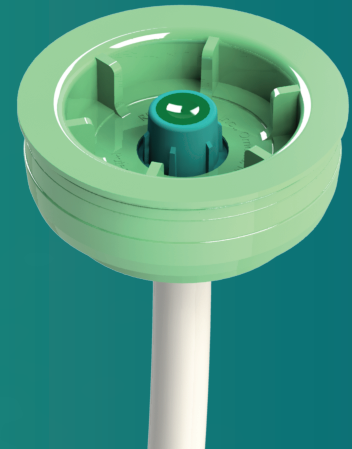

► What is it and what does it do?

The SafTFlo® Mechanical Vent system takes our Closed Loop technology one step further. It is truly more “closed” than anything being offered in the industrial and institutional cleaning market.

Many Closed Loop systems on the market today have some sort of full-time venting in place - air being exchanged in and out of the bottle 100 percent of the time. In some cases, these vents can become clogged and can be the source and point of potentially dangerous leaking.

What makes our **Mechanical Vent** Closed Loop offering unique is the specially engineered vent ports. The vents remain completely sealed until the mating cap adapter is installed on to the container, “mechanically” opening the vent ports.

► BENEFITS

- Venting remains closed until reaching the point of use
- Hazardous leaks are virtually eliminated
- Valves are cleaned upon opening - eliminating crystallization

► KEY FEATURES

- Available in 63mm and 70mm sizes
- Materials: Plug- Polypropylene
Spring- Hastelloy and Stainless steel
- Available in medium flow rates
- Please contact your sales representative for color options
